Executive Summary

This Industrial Pretreatment Program Annual Report is provided pursuant to 40 CFR 403.12(i) and Massachusetts Water Resources Authority's (MWRA's) National Pollutant Discharge Elimination System (NPDES) Permit numbers MA0103284 and MA0100404. It covers the reporting period of July 1, 2020 through June 30, 2021 (Fiscal Year (FY) 21).

Executive Summary and Program Highlights

The FY21 report documents MWRA's ongoing efforts to implement the requirements of 40 CFR Part 403, General Pretreatment Regulations. Fiscal year 2020 presented a unique challenge. In the winter of 2019/2020, the Coronavirus Disease (COVID-19) was identified in the United States. This would represent the beginning of a worldwide pandemic that continues to this day. On March 20, 2020, MWRA suspended a majority of its field activities, including monitoring and inspections for the Authority's industrial pretreatment program. Field activities did not resume again until June 22, 2020.

MWRA's Toxic Reduction and Control (TRAC) Department is responsible for implementing MWRA's industrial pretreatment program. Fiscal year 2021 continued to present a challenge due to the Coronavirus Disease (COVID-19) pandemic. Although fieldwork resumed, a large increase in COVID-19 cases going into the winter and the new, more contagious delta variant in the spring led to personnel limitations and continued changes in how staff performed monitoring and inspections. TRAC transitioned its business processes to primarily electronic-based in response to the COVID-19 pandemic. These processes and practices proved to be efficient and will be utilized moving forward. Many TRAC field staff worked a hybrid remote schedule that allowed monitoring and inspections for MWRA's industrial pretreatment program to continue while minimizing contact with others.

Some highlights from the TRAC Department's FY21 activities in the Metropolitan Boston and Clinton sewerage services areas include:

Significant Industrial Users: The number of facilities designated as Significant Industrial Users (SIUs) in MWRA's sewer service areas at any time during FY21 was 190, three of which discharged to the Clinton Wastewater Treatment Plant. At the end of the fiscal year, the number of SIUs was 181. TRAC staff inspected 190 SIUs and sampled 166 SIUs. In FY21, 24 SIUs were not sampled either because there was no discharge or they went out of business before they could be sampled. The number of SIUs in Significant Noncompliance (SNC) in FY21 was 26, a decrease over FY20.

Permitting: TRAC issued or renewed a total of 295 industrial permits during FY21, including 49 permits to SIUs located in the Metropolitan Boston sewerage service area. Ninety four percent of the SIU permits were issued within 120 days of their application received dates or previous expiration dates, whichever was later, and 100 percent were issued within 180 days. Five permits were issued in the Clinton service area. Four permits were issued in 90 days, consistent with the requirements of the Clinton NPDES permit effective March 1, 2017. TRAC issued one permit outside the 90-day timeframe due to longer than usual time reviewing the permit due to delays caused by remote working during the pandemic. **Monitoring and Inspections:** TRAC staff completed 1,506 sampling events at industrial/commercial facilities and 1,599 non-industrial sampling

events (e.g., combined sewer overflow and other special project events). TRAC staff also completed a total of 1,380 inspections of industrial facilities; 634 inspections of oil/water separators at vehicle maintenance facilities and other garages; and 126 inspections of septage haulers and septage receiving sites.

Enforcement Program: TRAC issued a total of 270 early enforcement actions (Notices of Violations and Traps Warning Letters) and 7 higher-level enforcement actions (Notices of Noncompliance, and Notices of Proposed Permit Suspension) to industrial and commercial facilities. SIUs received 96 Notices of Violation and 2 higher level enforcement actions (2 Notices of Noncompliance).

FY21 Accomplishments: TRAC supported the initial study of COVID-19 in wastewater by collecting wastewater samples at the MWRA's four headworks. COVID-19 samples were analyzed by a contract lab to help determine the viral RNA signal of each sample and better understand which areas of the system showed the strongest signal.

TRAC, in partnership with the Executive Office of Energy and Environmental Affairs' Office of Technical Assistance and Technology (OTA) began an outreach campaign to MWRA's Significant Industrial Users (SIUs) regarding per- and polyfluoroalkyl substances (PFAS). OTA offered all of the SIUs free and confidential support for identifying and reducing PFAS containing chemicals in their processes. PFAS regulations are evolving quickly. In FY22, MWRA plans to build off this outreach and implement a program to control sources of PFAS in our wastewater. MWRA's initial efforts to reduce PFAS in our wastewater will focus on controlling sources of PFAS from dischargers requiring permits.

Fiscal year 2021 was the second year of implementation for the new dental discharges group permit. The first round of annual invoices were issued in March 2020 to just over 700 dental facilities. During FY21, MWRA issued 21 group permits for dental discharges which is in addition to the 714 dental discharge permits that were issued in FY20. These are five-year permits and require dental facilities to comply with a series of Best Management Practices included in the permit.

Staffing: During FY21, TRAC ended the year without any vacant positions to fill. Currently there are 3 vacancies occurring early in FY22 due to retirements and promotions. All 3 vacancies are anticipated to be filled in FY22.

Section I.

Pretreatment Program Activities and Results

Section I. Pretreatment Program Activities and Results

A detailed accounting of the pretreatment program activities and accomplishments for MWRA's Industrial Users (including Significant Industrial Users or SIUs), during FY21 is presented below.

Appendix A contains information on MWRA's SIUs, and provides, in its Key, criteria for SIU status and compliance status codes. The Appendix provides information about why the facility is a SIU and whether it is in compliance with reporting requirements, categorical standards and local limits, dates of MWRA inspections and monitoring events for each facility, and what, if any, enforcement actions were taken by MWRA against the facility. Appendix B details all permitted industrial users not classified as SIUs. The information includes a description of the sampling locations and sampling requirements for each industry, any discharge violations during the year, and all enforcement actions taken against them during the year. Each SIU is inspected at least once per fiscal year and each SIU with a discharge to the sewer system is sampled at least once per fiscal year.

Statistics on MWRA's SIUs and the number of SIUs in Significant Noncompliance (SNC) for FY21 for the Clinton and the Metropolitan Boston sewerage service areas are summarized below. The list of SIUs in SNC can be found in Appendix C.

Industrial Users in FY21

Total number of permitted industrial users = 2114

- The number of SIUs = 190 (3 in Clinton)
- The number of SIUs on June 30, 2020 = 181 (3 in Clinton)
- The number of SIUs that were Categorical Industrial Users (CIUs) = 72 (1 in Clinton)
- Industries categorized as SIUs because of process flows of at least 25,000 gallons per day (gpd) = 48 (0 in Clinton)
- Industries categorized as SIUs for Potential To Violate (PTV) = 105 (2 in Clinton)
- The number of SIUs in SNC = 26 (0 in Clinton)
- The number SIUs in SNC last fiscal year = 32 (2 in Clinton)
- The number of industries in SNC for reporting violations only = 9 (0 in Clinton)
- The number of industries in SNC for reporting violations only for last fiscal year = 9 (2 in Clinton)
- The number of SIUs in SNC for discharge violations= 15 (0 in Clinton)

The EPA Pretreatment Annual Report Summary forms are attached to the end of this report as Appendix L. A list of permitted users that were SIUs in FY20 but not in FY21 is attached as Appendix D.

MWRA typically holds annual educational meetings with SIUs to review and reinforce methods for staying in compliance. MWRA is working on plans to host virtual SIU

meetings during the spring of 2022. The FY21 SIU meetings were postponed due to the COVID-19 pandemic.

Permitting

Appendix A provides permit issuance and expiration dates for all SIUs. In FY21, 49 SIU permits were issued in the Metropolitan Boston sewerage service area. TRAC issued 94 percent of these SIU permits (46 permits) within 120 days of their application received dates or previous expiration dates, whichever was later, and 100 percent (49 permits) within 180 days of their application received dates or previous expiration dates, whichever was later. The Clinton NPDES permit requires staff to issue 100 percent of permits, both SIU and NSIU, within 90 days of their application received dates or previous expiration dates, whichever is later. Five permits, 3 SIU and 2 NSIU, were issued to industries in the Clinton area during FY21. TRAC issued one permit outside the 90-day timeframe due to longer than usual time reviewing the permit due to delays caused by remote working during the pandemic.

Figure 1: Inspecting Pretreatment System

During FY21, TRAC completed the following permitting activities:

- Total industrial permits issued = 295
- Total industrial permit renewals = 200
- Industrial permit renewals or issued to SIUs = 52
- Industrial permits issued to new dischargers = 95, including:
 - 21 Group Permits for Dental Discharges
 - 6 Group Permits for Food Processing
- Industrial permits revised = 38
- Municipal permit renewals = 45
- Temporary Construction Dewatering permits issued or renewed = 14
- Permits issued to municipal drinking water treatment plants = 4

Inspections

Appendix A provides dates of inspections for all SIUs. During FY21, TRAC completed the following inspection activities:

Total Industrial Facility visits = 1,380

- Annual inspections of SIUs = 190
- Other SIU inspections¹ = 144
- Non-SIU inspections = 1,046
- Audits of G1 (photodevelopers and printers) facilities = 0
- Audits of G2 (food processors) facilities conducted = 8
- Industrial Survey inspections² = 144
- Visits with no inspections³ = 52

Septage facility inspections = 126

- Septage receiving sites = 123
- Septage hauler inspections = 3

Oil/water separator (trap) inspections = 634

- Full trap inspections = 352
- New trap inspections = 130
- Trap visits with no inspection⁴ = 152

Figure 2: New trap inspection

Monitoring

During FY21, TRAC's sampling staff conducted routine and emergency sampling activities for the pretreatment program as well as for other MWRA programs. Appendix A provides information on the dates of all MWRA sampling events for each SIU.

¹ Other SIU inspections include those conducted for permitting, follow-up to a prior inspection, enforcement/compliance inspections, sample location inspections, spot inspections and/or to gather additional information from facility contacts.

² Industrial Survey inspections include visits to newly identified addresses with potential industrial or commercial sewer discharges and visits to addresses confirmed at one time to have had only sanitary discharges for re-confirmation of status.

³ These visits include visits to deliver documents and/or confirm address/contact information.

⁴ Trap visits with no inspections result from facilities that had traps in the past but have since had them removed, visits when the trap was inaccessible or a knowledgeable contact was unavailable, or visits when the facility was found closed at the time of the visit.

A summary of sampling activities completed by the staff follows:

- SIUs with flow sampled at least once^{5,6,7} = 166
- Number of sample locations (connections) at SIUs sampled at least once = 384
- Number of sample locations at SIUs that were sampled more than once = 178
- Total number of sampling events at SIUs = 1,145
- Non-SIUs sampled once = 136
- Number of sample locations at Non-SIUs sampled = 179
- Total number of sampling events at Non-SIUs = 361
- Total number of industries sampled = 302
- Total number of sampling events at all industries = 1,506
- Sampling events in support of NPDES permits = 176
- Sampling events in response to emergencies = 4
- Sampling events for the MWRA Local Limits program = 259
- Sampling events for special projects = 967
- Total number of non-industrial events = 1,599

Enforcement

During FY21, TRAC initiated a total of 287 enforcement actions to industrial and commercial users of the sewer system. The types of actions and the number of each type follows. Appendices A and B explain the various types of enforcement actions, provides information on which facilities received enforcement actions, and when and what type(s) of actions. Appendix F provides a list of penalties assessed and collected in FY21.

- Notices of Violation issued = 233 (96 to SIUs; 1 to SIUs in Clinton)
- Warning letters about gas/oil separator maintenance and accessibility 37 (Appendix E)
- Rulings = 2 (1 to a SIU)
- Notices of Noncompliance issued = 5 (2 to SIUs)
- Notice of Proposed Permit Suspension = 2 (0 to a SIU)
- Return to Permit Letters = 3 (2 to SIUs)
- Extension Letters = 5 (4 to SIUs)

⁵ Seven facilities were not sampled during FY21. Prolerized New England LLC, MBTA Wellington Carhouse, Commonwealth of MA_DEP Northeast Region and Photonwares Inc were not sampled because they did not discharge in FY21. Celldex, Metrowest Medical Center Natick and Epic Technology were not sampled because they went out of business in FY21.

⁶ Two facilities became SIUs during FY21. Conformis Inc was sampled; Prolerized New England LLC did not discharge during FY21.

⁷ Six discharging SIU facilities went out of business in FY21 (Epic Technologies Inc, Celldex Therapeutics Inc, Legal Seafoods Inc, Metrowest Medical Center Natick and Hopwood Globe LLC) and of those Metrowest Medical Center, Epix Technologies Inc and Celldex Therapeutics Inc were not sampled.

Information Systems

MWRA continues to utilize the Inflection Point Solutions' (IPS) Pretreatment Information Management System (PIMS) software to manage its pretreatment program. The system continues to be adapted to accommodate pretreatment program requirements. TRAC's in-house information systems staff are responsible for supporting system design and implementation, data entry, quality assurance, and project management and coordination.

EPA's Cross-Media Electronic Reporting (CROMERR) Regulations, promulgated in 2005, provides a legal framework for electronic reporting under Title 40 of the Code of Federal Regulations to EPA and state, tribal and local governments, including MWRA, that are authorized to administer federal programs. The regulation authorizes electronic reporting for environmental programs while creating a level of corporate and individual accountability for those submitting environmental data.

MWRA is in the process of developing a CROMERR compliant application for accepting electronic laboratory data. Currently, laboratories submit industry sampling results through the PIMS WebSMR online portal. MWRA is working with EPA to utilize EPA's Shared CROMERR Services application to incorporate the additional functionality (electronic signature and Copy of Record) into our current WebSMR electronic data submittal processes. MWRA anticipates that testing of the new system will begin in FY21. A rollout of a new CROMERR compliant process will follow EPA's approval of our CROMERR application and the completion of system testing with WebSMR users. MWRA currently anticipates that the new CROMERR compliant process will be available during the second half of FY22.

Legal Support

MWRA's Law Division provides legal and policy advice and counsel to TRAC managers and staff, and represents MWRA in pretreatment-related matters.

In FY21, Law Division work for TRAC included:

- Reviewing and commenting on TRAC penalty assessment notices, and on enforcement orders, notices of noncompliance, and rulings as requested;
- Representing MWRA in administrative appeals of penalty assessment notices, enforcement orders, notices of noncompliance and permits;
- Representing MWRA in settlement negotiations; and
- Tracking bankruptcy filings by MWRA permittees.

Local Limits

A renewal application for the Clinton NPDES permit was submitted in August 2021, 6 months in advance of its expiration date. MWRA continues sampling in anticipation of a renewed permit will review local limits per the permit requirements upon its renewal.

Figure 3: Auto samplers for NPDES and Local Limits at the Clinton Wastewater Treatment Plant

In anticipation of renewal of our Deer Island Treatment Plant NPDES permits, MWRA staff have been sampling since 2005 to support an evaluation of existing Metropolitan Boston sewerage service area local limits. Those limits will be evaluated per EPA requirements established in the Deer Island NPDES Permit upon its renewal.

Emergency Response

TRAC field staff are responsible for responding to emergency events, toxics releases, and spills to the sewer system. These releases may result in Interference (disabling of the treatment plant's facilities/processes), or Pass-Through (discharge of toxics through the treatment works into the receiving waters). Due to the abrupt and often hazardous nature of these events, they generally take precedence over normal monitoring and inspection activities. Chemical and oil spills also pose significant concerns to the collection and treatment systems, due to the possibility of explosion, toxic fumes, and facility damage.

TRAC staff respond to these types of events to assess their potential to affect the sewerage system and downstream facilities. TRAC staff are an integral part of MWRA's emergency response organization and are trained to respond immediately to emergencies posing a threat to public health, worker safety, and facility operation. A TRAC manager and two sampling associates, as well as a fully equipped sampling van are on-call 24 hours a day to respond to reported emergencies.

TRAC emergency responses may be initiated for both short-term, episodic releases and continuing events, which may potentially impact the Authority's collection and treatment system. During FY21 there were not any reported releases in the sanitary sewer district, therefore, TRAC staff did not respond.

Pass-Through and Interference

There were no investigations of, nor were there any instances of, Pass-Through or Interference at the Deer Island Wastewater Treatment Plant or the Clinton Wastewater Treatment Plant in FY21.

Pretreatment Program Resources

MWRA's TRAC Department is organized along a functional alignment. Presently, a Sr. Program Manager for Field Operations and Permitting oversees two Regional Managers, one for Monitoring and one for Inspections and Permitting. The Senior Program Manager also directly oversees the 8M and Direct Connections Group.

The Inspections Regional Manager supervises 9 Industrial Coordinators, who conduct inspections and draft industrial permits, and three staff who are responsible for implementing MWRA's septage and gasoline/oil separator programs. The Monitoring Regional Manager oversees 13 monitoring staff who collect industrial and other wastewater samples.

A Sr. Program Manager for Compliance and Enforcement oversees three Compliance Coordinators as well as staff dedicated to file and data management. This group is primarily responsible for TRAC's enforcement proceedings. They review sampling data for permit compliance and draft Notices of Violations, Notices of Non-Compliance, calculate the dollar amounts of penalties, as well as oversee higher levels of enforcement in concert with the Legal Department. This section is also responsible for TRAC's information management system, PIMS.

TRAC has 46 full-time permanent positions (see Appendix G). There are three vacant positions at this time due to retirements and promotions occurring in FY22, there are plans to fill all three vacancies during this fiscal year.

Budget

In FY21, the TRAC Department recovered \$2,566,229 or 49 percent of the Department's actual Current Expense Budget (CEB) spending (\$5,276,089) through Permit and Monitoring Charges.

Program Cost Recovery

MWRA's Incentive and Other Charges Program continues to recover a substantial portion of MWRA's costs of inspecting, monitoring, and permitting industrial sewer users. The total adjusted amount billed under the program in FY21 was \$2,516,741, an increase from \$2,368,967 in FY20. As of September 2021, collections for FY21 bills were at \$2,566,229 (compared to \$2,383,295 in FY20), an approximate 102% recovery of the adjusted amount invoiced. The additional revenue is the result of payment of interest, payment of outstanding permitting and monitoring charges, and new industries opening in the service area.

TRAC's revised Sewer Use Regulations (360 CMR 10.000), promulgated September 6, 2019, included a 3 percent increase in all permitting and monitoring charges in FY21. There were two additional changes to the permitting and monitoring charge structure in FY20. Permittees holding a Low Flow and Low Pollutant Discharges General Permit are billed annually, rather than upon permit renewal once every five years. A new permit charge was added for the Dental Discharges Group Permit, which is also billed annually.

In addition to the changes made in FY20, for the upcoming three fiscal years (2022, 2023, and 2024), permitting and monitoring charges will increase by an additional 3 percent.

FY21 Accomplishments

TRAC supported the initial study of COVID-19 in wastewater by collecting wastewater samples at the MWRA's four headworks. COVID-19 samples were analyzed by a contract lab to help determine the viral RNA signal of each sample and better understand which areas of the system showed the strongest signal.

TRAC, in partnership with the Executive Office of Energy and Environmental Affairs' Office of Technical Assistance and Technology (OTA) began an outreach campaign to MWRA's Significant Industrial Users (SIUs) regarding per- and polyfluoroalkyl substances (PFAS). OTA offered all of the SIUs free and confidential support for identifying and reducing PFAS containing chemicals in their processes. PFAS regulations are evolving quickly. In FY22, MWRA plans to build off this outreach and implement a program to control sources of PFAS in our wastewater. MWRA's initial efforts to reduce PFAS in our wastewater will focus on controlling sources of PFAS from dischargers requiring permits.

Fiscal year 2021 was the second year of implementation for the new dental discharges group permit. The first round of annual invoices were issued in March 2020 to just over 700 dental facilities. During FY21, MWRA issued 21 group permits for dental discharges which is in addition to the 714 dental discharge permits that were issued in FY20. These are five-year permits and require dental facilities to comply with a series of Best Management Practices included in the permit.

Section II.

Pollutant Analyses and Comparison to Environmental Standards

Section II. Pollutant Analyses and Comparison to Environmental Standards

The Environmental Quality Department (ENQUAL) evaluates the water quality and biological health of Massachusetts Bay, to ensure that the Deer Island discharge does not harm the marine environment. ENQUAL monitors water quality data from Boston Harbor, and the rivers tributary to the harbor, to assess the impacts of CSOs, and to track the effects of the Boston Harbor Project and the long-term CSO control plan on the harbor.

MWRA measures pollutant concentrations in the plant influent to determine if pollutants are present in quantities that could inhibit proper operation of the treatment facilities, in the effluent to determine the effectiveness of its pollutant control measures and compliance with water quality standards, and in the sludge to ensure it meets beneficial reuse criteria. This section discusses the results of the influent and effluent analyses.

Priority Pollutants Scans

Metropolitan Boston Service Area: MWRA regularly performs scans for priority pollutants on Deer Island Treatment Plant (DITP) influent and effluent samples. Additional non-priority pollutants are analyzed in support of meeting receiving water quality goals and the beneficial reuse standards for plant biosolids.

Appendix H presents the analyses of influent and effluent samples from DITP using both EPA-approved methods and (for some organic contaminants) non-EPA-approved ultra-low detection methods. Results are presented as flow-weighted monthly averages of all the samples analyzed during the fiscal year. For levels below reporting limits, one half of the reporting limit for inorganic compounds or one tenth of the quantitation limit for organic compounds was substituted to calculate concentrations. This allows the data to be used without the less conservative assumption that non-detect values are zero. Analyses performed using non-EPA-approved ultra-low detection methods generally confirm that this methodology for handling non-detects is a conservative way to estimate the concentrations of otherwise non-detected pollutants.

Influent: As would be expected for a large urban system, fats, oils and grease, nutrients, and most metals were detected regularly. Of the samples analyzed using EPA-approved detection methods, acetone (used in paints, varnishes, and lacquers manufacturing) and benzoic acid (used primarily as a food preservative and in pharmaceutical and cosmetic preparations) were detected regularly. Benzyl alcohol (used as a general solvent for inks, paints, perfumes, and waxes), 4-methylphenol (*p*-cresol) (an intermediate in the manufacture of chemicals, dyes, plastics, and antioxidants), 2-butanone (methyl ethyl ketone) (widely used as a solvent and intermediate product in the manufacture of ketones and amines), and carbon disulfide (a chemical used in the manufacture of rayon, cellophane, rubber chemicals, and flotation chemicals) were detected in approximately half of the samples collected. Phenol (used in plastics synthesis) was detected in roughly 25% of the collected samples. Toluene (a solvent and a chemical used in the manufacture of benzene derivatives, dyes, and perfumes) tetrachloroethene (used primarily in the dry cleaning industry and in metal degreasing); and 1,2-dichloroethane (used in production of plastics and vinyl products) were detected in less than 10% of samples. Styrene (used in the manufacture of synthetic rubber, plastics, resins, and protective coatings) was detected in 1 of 48 samples.

Of the pesticides and PCBs in tests with EPA-approved methods, total AMP (Ambient Monitoring Plan) PCBs (20 PCB congeners specific to MWRA's ambient monitoring plan) were detected regularly. Alpha-chlordane and gamma-chlordane were detected periodically. 4, 4'-DDD was detected once out of 44 samples. When characteristics of DITP influent are compared to literature inhibition values, analysis shows that the majority of parameters did not exceed the thresholds. Zinc exceeded the threshold once in FY21. DITP did not experience any problems with process inhibition in either the sludge digestion or the activated sludge process during FY21. Appendix H includes a table comparing DITP's influent monthly average concentrations to inhibition values.

Effluent: The activated sludge secondary process removes from the effluent most of the organic pollutants and pesticides and PCBs. Of the samples analyzed with EPA-approved methods, total AMP PCBs were detected regularly. The activated sludge process also effectively removes metals. Removal rate for mercury was 96%, for aluminum 92%, lead 91%, copper 90%, silver 85%, zinc 84%, chromium 84% cadmium 82%, chromium 84%, and nickel 44%.

The DITP NPDES permit has no numerical permit limits for any priority pollutants except for arochlors because of the low concentrations in the effluent and high available dilution. In fact, toxic contaminants generally met water quality criteria in the effluent even before dilution. Copper is the only parameter that requires use of a dilution factor to meet water quality criteria. MWRA's NPDES permit allows for a 50:1 dilution for determining compliance with acute water quality standards and a 70:1 dilution for chronic water quality standards. Appendix H includes tables comparing DITP's effluent to both acute and chronic water quality standards.

Clinton Treatment Plant: MWRA also samples the Clinton Treatment Plant (CLTP) influent and effluent for conventional parameters, nutrients, and certain metals. Appendix I presents the results of these analyses.

Influent: Arsenic, copper, iron and zinc were detected consistently. Aluminum and lead were detected in three quarters of the samples, mercury in half of the samples. Cyanide was detected in one of four samples collected. No other tested metals were detected. Appendix I-2 compares CLTP influent samples to literature inhibition values for its treatment processes. No parameters exceeded either the published acute inhibition level for the activated sludge or the sludge digestion processes in FY21.

Effluent: Removal rates for metals were 97% for aluminum, 94% for lead, 91% for arsenic, 87% for copper, 85% for zinc and 74% for iron.

Appendix I also includes tables comparing effluent concentrations with both acute and chronic water quality criteria. The CLTP NPDES permit allows for a 1.6:1 dilution for determining compliance with acute and chronic water quality criteria. In FY21, the CLTP effluent met nearly all of the acute and chronic water quality standards for the Nashua River. Cyanide was detected once in the effluent. To be conservative, half the reporting limit is used when determining compliance with water quality standards, resulting in three instances when the calculated value was above the cyanide standard, and one actual exceedance in FY21.

Prior to 2011, aluminum levels in the CLTP effluent had the potential to exceed water quality standards when the plant was using aluminum sulfate (alum) for phosphorus removal. In early May 2011, CLTP replaced alum with ferric chloride, which has been as effective at phosphorus removal as aluminum sulfate. Since that time, the effluent concentrations have been well below the water quality criteria of 87 µg/L and 750 µg/L for chronic and acute water quality standards respectively. The December 2016 NPDES permit requires stringent permit limits on phosphorus year-round and does not include a reporting requirement for aluminum. However, the permit prohibits the use of alum for phosphorus removal.

The current permit (effective March 2017), has effluent limits for copper of 11.6 µg/L (average monthly) and 14.0 µg/L (maximum daily). There were no copper concentration exceedances in FY21.

Toxicity

MWRA tests the acute and chronic toxicity of the DITP effluent every month and the CLTP effluent quarterly. Effluent toxicity provides an overall view of effluent quality, ensuring that the effluent does not adversely affect the receiving waters. The results of the Deer Island and Clinton toxicity tests for FY21 can be found in Appendix J.

Acute toxicity, or LC-50 (lethal concentration 50%), is the concentration of effluent in a sample that kills half of the test organisms over the duration of the test. Acute toxicity tests involve preparing a series of test concentrations by diluting effluent with control water. Groups of test organisms are exposed to each effluent concentration and a control for a specified period. Chronic toxicity, or NOEC (no observed effect concentration), measures the highest effluent concentration at which no observed chronic effects will occur at continuous exposure to test organisms (in a life-cycle or partial life-cycle). For example, a NOEC limit of 1.5% means that there should be no effect when 1.5% of the sample is effluent, and the remainder dilution water. Chronic tests evaluate toxicity based on sub-lethal effects (growth, reproduction, mortality), exposing test organisms to samples during a sensitive period in the life-cycle.

The MWRA DITP permit requires four tests for effluent toxicity testing. Two 48-hour acute static toxicity tests using the mysid shrimp (*Americamysis bahia*) and the inland silverside fish (*Menidia beryllina*) measure the short-term lethal effects caused by the effluent. A chronic survival and growth test using *Menidia* and a chronic fertilization test using the sea urchin (*Arbacia punctulata*) both measure subtle toxic impacts over a longer period of time. Any acute LC-50 below 50% (i.e. less than 50% concentration) or chronic NOEC below 1.5% (i.e. less than 1.5% effluent concentration) would violate the NPDES limit. There were no toxicity permit violations for DITP effluent in FY21.

The CLTP permit requires two tests for effluent toxicity using freshwater daphnid shrimp (*Ceriodaphnia dubia*). The first, a 48-hour acute toxicity test, measures potential short-term lethal effects caused by the effluent. The second test includes a chronic survival and reproduction test that measures subtle toxic impacts over a longer period of time. Any acute LC-50 below 100% or chronic NOEC below 62.5% (i.e. less than 62.5% concentration) would violate the NPDES limit.

There was one toxicity permit violation for CLTP effluent in FY21. In September 2020, the NOEC for the *Ceriodaphnia dubia* chronic reproduction test was 25%, (i.e., a 25% concentration of effluent resulted in LC-50 chronic effect), which is below the permit limit of 62.5%. Investigations do not yield anything unusual that would explain the toxicity.

Residuals Quality

EPA and the MassDEP regulate the quality of sewage biosolids intended for beneficial use. At the federal level, these products are governed by the Clean Water Act. These regulations establish quality criteria for several metals and for the degree of pathogen reduction. Federal and state regulations have adopted a two-tiered approach to biosolids regulation. Products meeting the strictest standards for all parameters (MassDEP Type I) may be distributed or marketed with few restrictions. Products meeting only the less- prohibitive Type II standards may be used as fertilizer, but additional distribution, use restrictions and management practices apply. During FY21, MWRA's biosolids violated the state standard for Molybdenum.

Federal and state limits for the distribution of biosolids as a MassDEP Type I Sludge with no limitations for land application are outlined in the tables found in appendix K.

Industry name Permit Number, Date last permit issued/expiration date*

Industry Address

National Pretreatment Categorical Standard: *See description below*

MWRA Category: *See description of MWRA categories below*

Sample locations: *Sample location number and description of sampling location. Sample locations coded as “Unregulated” are only subject to MWRA limits. Sample locations coded as “Regulated” are subject to both Federal Categorical standards and MWRA limits.*

Reason for SIU status: *See descriptions of reasons for SIU status below*

SNC: *Yes, if industry was in significant noncompliance. See descriptions of SNC status below. Please note that the SNC quarters listed in Appendix A are inaccurate due to a database problem. Refer to Appendix C for the correct information.*

Inspections: *Dates the MWRA inspected the facility*

Monitoring: *Dates the MWRA took wastewater samples for analysis from the industry’s Sampling locations*

Enforcement Actions: *Dates and type of enforcement actions in the last two fiscal years (see description of enforcement actions below).*

- * No permit issued date indicates that a permit application has been received and is currently in process. If the permit expired date is more than a month or two in the future, the industry is currently permitted but has recently been identified as an SIU and the permit is being reevaluated. If there is no permit expired date, it is a newly identified discharger to the sewer system.

National Pretreatment Categorical Standards:

The number refers to a section and subsection of 40 CFR in which EPA has specified limits on the quantities or concentrations of pollutants that may be discharged. The name after the number is the EPA description of the industrial subcategory to which the specified limits apply. This identification is made by individual sample location. Therefore, an industry may be regulated by more than one subsection. If no number appears here, but the reason for SIU status is CIU, it indicates that the industry has a regulated process, but that there is no flow to the sewer system.

PSes: *Pretreatment Standards for Existing Sources -Existing sources refers to a building, structure, facility or installation whose construction began prior to the date that the standards were proposed.*

PSNs: *Pretreatment Standards for New Sources -New Sources refers to a building, structure, facility or installation whose construction began after the standards were proposed.*

MWRA Category:

- Category 1: A sewer user whose process results in a discharge containing one or more substances in a concentration or quantity requiring pretreatment to meet the requirements of federal and local discharge limits.
- Category 2: A sewer user whose process results in a discharge containing one or more substances regulated by the MWRA at a concentration and quantity not requiring pretreatment to meet the requirements of federal and local discharge limits.
- Category 3: A sewer user whose process results in a discharge not containing a substance regulated by the MWRA or photoprocessors who can meet federal and local discharge limits with silver recovery units.
- Category 4: A sewer user without an industrial discharge to the sewer system.

Reasons for SIU Status:

Possible reasons for an industry to be designated a Significant Industrial User:

- CIU-# An industrial user subject to Categorical Pretreatment Standards under 40 CFR, 403.6 and 40 CFR, Chapter I, subchapter N. Any industry that falls under these categories is considered an SIU whether or not they have flow. These industries are Categorical Industrial Users (CIUs).
- 25K or >25,000 gpd An industry which discharges an average of 25,000 gallons per day or more of process wastewater to the sewer system (excluding sanitary, noncontact cooling and boiler blowdown wastewater;)
- PTV An industry which is designated as such by the MWRA on the basis that the industrial user has a reasonable potential for adversely affecting the operation of the collection system or treatment plant, or violating any pretreatment requirement.

Significant Noncompliance:

Possible reasons for an industry to be in Significant Noncompliance:

- A. Chronic violations of wastewater discharge limits, defined here as those in which 66% or more of all of the measurements taken during a six month period exceed (by any magnitude) the daily maximum limit or the average limit for the same pollutant parameter;
- B. Technical Review Criteria (TRC) violations, defined here as those in which 33% or more of all of the measurements for each pollutant parameter taken during a six month period equal or exceed the product of the daily maximum limit or the average limit times the applicable TRC (TRC=1.4 for BOD, TSS, fats, oil and grease, and 1.2 for all other pollutants except for pH);
- C. Any other violation of a pretreatment effluent limit (daily maximum or longer term average) that the MWRA determines has caused, alone or in combination with other discharges, interference or pass through (including endangering the health of treatment plant personnel or the general public);
- D. Any discharge of a pollutant that has caused imminent endangerment to human health, welfare or to the environment or has resulted in the MWRA's exercise of its emergency Authority to halt or prevent such discharge;
- E1. Failure to meet, within 90 days after the schedule date, a permit milestone for starting construction.
- E2. Failure to meet, within 90 days after the schedule date, a permit milestone for completing construction.
- E3. Failure to meet, within 90 days after the schedule date, a permit milestone for attaining final compliance.
- E4. Failure to meet, within 90 days after the schedule date, an enforcement milestone contained in a permit or enforcement order for starting construction.
- E5. Failure to meet, within ninety days after the schedule date, a compliance milestone contained in an enforcement order for completing construction.
- E6. Failure to meet, within ninety days after the schedule date, a compliance milestone contained in an enforcement order for attaining final compliance.

- F1. Failure to provide, within 45 days after the due date, required baseline monitoring reports.
- F2. Failure to provide, within 45 days after the due date, required 90 day compliance reports.
- F3. Failure to provide, within 45 days after the due date, required self-monitoring reports.
- F4. Failure to provide, within 45 days after the due date, required compliance schedule reports.
- G. Failure to accurately report noncompliance;
- H. Any other violation or group of violations which the MWRA determines will adversely affect the operation or implementation of the pretreatment program. The MWRA has used this description for those industries that failed to submit permit applications in accordance with the regulations.

Enforcement Actions:

The type of enforcement action selected to respond to a violation depends on a variety of factors including, but not necessarily limited to: magnitude of the violations, duration of the violations, compliance history of the sewer user, perceived good faith of the user, clarity of the user’s responsibility, and, where such issues arise, the effects of the violation on the receiving waters and/or the treatment works.

TRAC’s enforcement options found in this report include:

Notice of Violation (NOV)

This enforcement action is a letter to the user describing the violation and asking the user to identify the reason for the violation and what steps it will take to ensure that the violation will not recur.

Notice of Noncompliance/Order to Take Corrective Action (NON/OTCA):

This formal, written notice and order identifies which requirements the user has violated and specifies deadlines by which the user must come into compliance. It requires increased sampling and reporting of discharges by the user and the submission of a detailed report by the user on how and when it intends to achieve and maintain compliance with MWRA regulations.

Enforcement Order (EO):

Issued by the MWRA to an industry outlining violations and the actions the violator must take.

Penalty Assessment Notice (PAN):

Formal, written notice to an industry assessing civil monetary penalties.

Supplemental Order to Comply (SOC):

A further order, usually issued after a previous order fails to bring an industry into compliance. Often issued with a Penalty Assessment Notice (PAN).

Administrative Orders (AO):

These formal written orders include Enforcement Orders, Supplemental Orders, Orders to Take Corrective Action, Orders to Comply, and Cease and Desist Orders. They are sent as follow-ups to *NON/OTCA*'s as new information is obtained, or are sent in other instances where violations of MWRA regulations are taking place or threaten to take place. They often require increased sampling and reporting of discharges by the user and detailed schedules to achieve or maintain compliance with MWRA requirements. They may contain an order to stop a discharge or a violation.

Notice of Proposed Permit Revocation (NPPR):

Issued to an industry when violations are so severe or repetitive, that the MWRA must resort to revoking the industry's permit.

Ruling on Request for Reconsideration of NON/OTCA/EO/SOC/NPPR:

In response to an industry's appeal of an order or permit revocation, the Authority will issue its decision in the form of a Ruling on Request for Reconsideration of the order or permit revocation.

Amended Ruling:

An amendment to a ruling or order which modifies the original ruling.

Compliance Schedule:

Issued by the MWRA in a permit or a settlement agreement. It lists dates and milestones that an industry must meet to achieve compliance.

Settlement Agreement:

A formal document resolving violations and enforcement actions.

Returned to Permit Letter:

Notice to an industry that the industry has been relieved, in part or in full, of the sampling and reporting requirements of a prior enforcement action and can, therefore, return to those of its permit.

Stipulated Penalties Under Agreement:

Penalties which the settling parties agreed to pay for certain types of violations during the period of a settlement agreement.

Interim Ruling on Req. for Reconsideration:

These rulings resolve some but not all, issues appealed by an industry. A formal ruling will be issued later.

Extension of NON/OTCA/EO/SOC/NPPR Letter:

Extends dates in compliance order.

TRAC has the power to take other types of actions for violations, some of which are described below:

Emergency Suspension:

Sewer service may be immediately suspended after informal notice to the user if the discharge reasonably appears to present an imminent danger to health, public welfare or the environment, or if it threatens to interfere with the operation of the sewer system.

Civil Court Action:

TRAC may refer a case to the Attorney general for action in civil court, including injunctive relief, the collection of penalties, and the recovery of expenses. Referrals are seldom made because TRAC can issue and enforce administrative orders and financial penalties without court action.

Criminal Action:

TRAC may refer a case to the Attorney General's Office and the Environmental Crimes Strike Force for criminal charges to be brought against a user. Referrals are made for serious and intentional violations.

FISCAL_YEAR

Parameters:

Fiscal_Year: 2021

KEY to Appendix B

Industry:

Industry address:

#: Permit number Category: MWRA category-see description of MWRA categories below

Current Sampling Requirements: Sample location numbers and descriptions; current permit sampling requirements (frequency and parameter)

Discharge Violations: Discharge violations occurring during the fiscal year: sample date, parameter, test result and MWRA limit

Enforcement Actions: Enforcement actions taken during the fiscal year: enforcement action Date and description

Notes: This appendix lists all non-significant industrial users which were permitted during the year. Most of these facilities meet the requirements of MWRA's Low Flow/Low Pollutant General Permit and are thus permitted as Category 10 facilities. These facilities are required to comply with all applicable regulations and the terms of their permits, but due to the nature and/or volume of their discharges, they are not required to conduct periodic self-monitoring, and MWRA does not typically sample their wastewater.

The newly issued Dental Discharges permits are included at the end of Appendix B.

Some violations reported in this appendix happened during the latter part of the year, and show no enforcement actions. This is most often due to the lag of time between when a sample is collected and when the data is submitted to MWRA for input into PIMS. Because sample analysis takes three weeks or more, the violation does not appear on the weekly violation report for some time after the violation occurs. Enforcement actions have been taken early in the year for those violations, but are not reported in this report.

Some industries have enforcement actions but no discharge violations. In some cases, the enforcement actions were related to violations occurring prior to the start of the fiscal year. In others, the enforcement actions were related to reporting violations that are not listed in this appendix.

MWRA Category:

- Category 1:** A sewer user whose process results in a discharge containing one or more substances in a concentration or quantity requiring pretreatment to meet the requirements of 360 CMR 10.021 through 10.025 and who does not have a Group, General, or Combined Permit for the Discharge.
- Category 2:** A sewer user whose process results in a discharge containing one or more substances regulated by 360 CMR 10.021 through 10.025 at a concentration and quantity not requiring pretreatment to meet the requirements of 360 CMR 10.021 through 10.025 and who does not have a Group, General, or Combined Permit for the Discharge.
- Category 3:** A sewer user whose process results in a discharge not containing a substance regulated by 360 CMR 10.021 through 10.025 and who does not have a Group, General, or Combined Permit for the Discharge.
- Category 4:** An SIU without an Industrial Waste Discharge to the Authority Sewerage System or any tributary thereto.
- Category 6:** A person with a Septage Discharge permit.
- Category 10:** A person with a General Permit for Low Flow and Low Pollutant Dischargers.
- Category 12:** A person with a Temporary Construction Site Dewatering permit.
- Category C1:** A person with a Combined Permit.

Category D1: A person with a Group Permit for Dental Discharges.

Category G1: A person with a Group Permit for Photo Processing, Printing, and Low Flow Operations.

Category G2: A person with a Group Permit for Food Processing.

Possible Enforcement Actions:

The type of enforcement action selected to respond to a violation depends on a variety of factors including, but not necessarily limited to: magnitude of the violations, duration of the violations, compliance history of the sewer user, perceived good faith of the user, clarity of the user’s responsibility, and, where such issues arise, the effects of the violation on the receiving waters and/or the treatment works.

TRAC’s enforcement options found in this report include:

Notice of Violation (NOV)

This enforcement action is a letter to the user describing the violation and asking the user to identify the reason for the violation and what steps it will take to ensure that the violation will not recur.

Notice of Noncompliance/Order to Take Corrective Action (NON/OTCA)

This formal, written notice and order identifies which requirements the user has violated and specifies deadlines by which the user must come into compliance. It requires increased sampling and reporting of discharges by the user and the submission of a detailed report by the user on how and when it intends to achieve and maintain compliance with MWRA regulations.

Enforcement Order (EO):

Issued by the MWRA to an industry outlining violations, and the steps that the Authority will take to enforce them.

Penalty Assessment Notice (PAN):

Formal, written notice to an industry assessing civil monetary penalties.

Supplemental Order to Comply (SOC):

A further order, usually issued after a previous order fails to bring an industry into compliance. Often issued with a Penalty Assessment Notice (PAN)

Administrative Orders (AO):

These formal written orders include Enforcement Orders, Supplemental Orders, Orders to Take Corrective Action, Orders to Comply, and Cease and Desist Orders. They are sent as follow-ups to NON/OTCA’s as new information is obtained, or are sent in other instances where violations of MWRA regulations are taking place or threaten to take place. They often require increased sampling and reporting of discharges by the user and detailed schedules to achieve or maintain compliance with MWRA requirements. They may contain an order to stop a discharge or a violation.

Notice of Proposed Permit Revocation (NPPR):

Issued to an industry when violations are so egregious, that the MWRA must resort to revoking the industry’s permit.

Notice of Proposed Permit Suspension (NPPS):

Issued to an industry with outstanding charges due.

Ruling on Request for Reconsideration of NON/OTCA/EO/SOC/NPPR

In response to an industry’s appeal of an order or permit revocation, the Authority will issue its decision in the form of a Ruling on Request for Reconsideration of the order or permit revocation.

Compliance Schedule:

Issued by the MWRA in a permit or a settlement agreement. It lists dates and milestones that an industry must meet to achieve compliance.

Settlement Agreement:

A formal document resolving administratively, violations and enforcement actions.

Return to Permit Letter:

Notice to an industry that the industry has been relieved, in part or in full, of the sampling and reporting requirements of a prior enforcement action and can, therefore, return to those of its permit.

Stipulated Penalties Under Agreement:

Penalties which the settling parties agreed to pay for certain types of violations during the period of a settlement agreement.

Interim Ruling on Req. for Reconsideration:

These rulings resolve some but not all, issues appealed by an industry. A formal ruling will be issued later.

Emergency Suspension:

Sewer service may be immediately suspended after informal notice to the user if the discharge reasonably appears to present an imminent danger to health, public welfare or the environment, or if it threatens to interfere with the operation of the sewer system.

Civil Court Action:

TRAC may refer a case to the Attorney general for action in civil court, including injunctive relief, the collection of penalties, and the recovery of expenses. Referrals are seldom made because TRAC can issue and enforce administrative orders and financial penalties without court action.

Criminal Action:

TRAC may refer a case to the Attorney General's Office and the Environmental Crimes Strike Force for criminal charges to be brought against a user. Referrals are made for serious and intentional violations.

Notes: Where parameters were below detection levels, one half of the method detection limit for inorganic compounds or one tenth of the quantitation limit for organic compounds was substituted to calculate concentrations. The annual average concentration is the flow-weighted average of all data points. The maximum concentration is the highest concentration observed in the monitoring year. Pesticides and PCBs** and Polyaromatic Hydrocarbons** tested with more sensitive methods which are not EPA-approved for permit compliance.

Notes: Where parameters were below detection levels, one half of the method detection limit for inorganic compounds or one tenth of the quantitation limit for organic compounds was substituted to calculate concentrations. The annual average concentration is the flow-weighted average of all data points. The maximum concentration is the highest concentration observed in the monitoring year.

Comparison of Sludge Quality to EPA and State Standards

Residuals Quality

EPA and the MassDEP regulate the quality of sewage biosolids intended for beneficial use. At the federal level, these products are governed by the Clean Water Act. These regulations establish quality criteria for several metals and for the degree of pathogen reduction. Federal and state regulations have adopted a two-tiered approach to biosolids regulation. Products meeting the strictest standards for all parameters (MassDEP Type I) may be distributed or marketed with few restrictions. Products meeting only the less-prohibitive Type II standards may be used as fertilizer, but additional distribution, use restrictions and management practices apply. During FY21, MWRA's biosolids violated the state standard for Molybdenum.

Federal and state limits for the distribution of biosolids as a MassDEP Type I Sludge with no limitations for land application are outlined in the tables below.

Federal Limits (40 CFR 503.13, Table 3)

Notes:

MAHLs were corrected for the pollutants that appear in bold.

(a) MAHLs were corrected for pollutants with MAHLs that are dependent on sludge criteria. Corrections were made to account for the effects of DITP recycle stream loadings.

(b) The Prelim calculated MAHL is not correct for dioxin, and Prelim could not be used to calculate the correct MAHL due to the very stringent dioxin water quality criteria (1.4x10⁻⁸), which could not be entered into Prelim correctly. Therefore, the corrected MAHL for dioxins was manually calculated.

10.24 : Specific Discharge Limitations/Local Limits

- (1) Any discharge of the following materials is prohibited:
- (a) Into the Metropolitan Sewerage Service Area:
 - 1. Mercury (enforced at 0.001 mg/l);
 - 2. Polychlorinated Biphenyls (PCBs);
 - 3. Pesticides, unless the Authority determines upon request that the substance is acceptable for Discharge to the Sanitary Sewer under the criteria for exclusion or exemption in 40 CFR Parts 152 and 455, or that the substance is otherwise acceptable to Discharge, and that the substance would not otherwise violate 360 CMR 10.021 through 310 CMR 10.024; and
 - 4. Hexachlorobutadiene.
 - (b) Into the Clinton Sewerage Service Area:
 - 1. Mercury (enforced at 0.001 mg/l);
 - 2. Polychlorinated Biphenyls (PCBs);
 - 3. Pesticides, unless the Authority determines upon request that the substance is acceptable for discharge to the sanitary sewer under the criteria for exclusion or exemption in 40 CFR Parts 152 and 455, or that the substance is otherwise acceptable to discharge, and that the substance would not otherwise violate 360 CMR 10.021 through 310 CMR 10.024;
 - 4. Hexachlorobutadiene; and
 - 5. Substances listed in 360 CMR 10.000: *Appendix C*.
- (2) Any discharge of the following materials shall not exceed the daily maximum limit for that material:
- (a) Into the Metropolitan Sewerage Service Area:

(3) The Daily Maximum Limit shall be determined on the basis of a Composite Sample, except a Grab Sample or Samples may be used in the following circumstances:

- (a) for a batch discharge, when the Grab Sample would be fairly representative of the batch as a whole;
- (b) for pollutants that are not amenable to composite sampling of an industrial wastestream by use of an automatic wastewater sampler, such as hexavalent chromium and volatile organics; or
- (c) when the Authority determines it is not feasible or appropriate to take a Composite Sample, such as when the discharge is of too short duration for automatic composite sampling or the sampling location is inaccessible for an automatic wastewater sampler.

10.24 : continued

A Composite Sample shall be taken at preselected intervals throughout the time in a day (or in a consecutive 24-hour period over two days when there is a continuous discharge of at least 24 hours over the course of the two days) during which the wastewater is discharged, except a shorter time period may be used if that shorter time period encompasses all or most of the wastewater discharge that day (or consecutive 24-hour period when there is a continuous discharge over the course of two days) or if a shorter period is authorized by the Authority. A batch discharge may have a Composite Sample taken throughout the discharge of the batch. A flow proportioned Composite Sample shall be taken, except a time interval Composite Sample may be taken when the Authority determines it is not feasible or appropriate to take a flow proportioned Composite Sample.

If a Grab Sample may appropriately be used, and more than one Grab Sample of a Discharge is taken during the day, the Daily Maximum Limit shall be measured by either the mathematical average of the analytical results of the Grab Samples or the analytical result of a composite of the Grab Samples.

10.25 : Dilution Prohibition

No person shall achieve, or attempt to achieve, compliance with 360 CMR 10.000 by diluting a Discharge instead of using proper pretreatment. The increased use of process water in place of proper treatment shall be considered dilution prohibited by 360 CMR 10.000.

10.26 : Compliance Measurement Location

All limitations imposed by 360 CMR 10.000 shall be applied at the end of the Pretreatment process line, at the end of the process line if there is no Pretreatment, or at or near the discharge location if there is no Pretreatment or process line. This shall not be construed to authorize a Person to introduce a pollutant into a wastestream after the compliance measurement location; rather, a sample taken at the compliance measurement location is intended to measure the pollutants in a discharge to the sewer before dilution of the wastestream.

Where it deems appropriate, the Authority may by permit or order impose alternative limits or compliance measurement locations to assure compliance with 360 CMR 10.000 and with federal, state, and local requirements. This may include use of the Combined Wastestream Formula when authorized by EPA regulations or use of a dilution factor when more than one stream is combined.

The Authority may require samples from individual process waste streams whether such waste streams are pretreated prior to discharge or not. The Authority may require that compliance measurement locations be clearly marked and/or photographed.

10.24 Specific Discharge Limitations/Local Limits

- (1) Any discharge of the following materials is prohibited:
- (a) Into the Metropolitan Sewerage Service Area:
 - 1. Mercury (enforced at 0.001 mg/l);
 - 2. Polychlorinated Biphenyls (PCBs);
 - 3. Pesticides, unless the Authority determines upon request that the substance is acceptable for Discharge to the Sanitary Sewer under the criteria for exclusion or exemption in 40 CFR Parts 152 and 455, or that the substance is otherwise acceptable to Discharge, and that the substance would not otherwise violate 360 CMR 10.021 through 310 CMR 10.024; and
 - 4. Hexachlorobutadiene.
 - (b) Into the Clinton Sewerage Service Area:

(3) The Daily Maximum Limit shall be determined on the basis of a Composite Sample, except a Grab Sample or Samples may be used in the following circumstances:

- (a) for a batch discharge, when the Grab Sample would be fairly representative of the batch as a whole;
- (b) for pollutants that are not amenable to composite sampling of an industrial wastestream by use of an automatic wastewater sampler, such as hexavalent chromium and volatile organics; or
- (c) when the Authority determines it is not feasible or appropriate to take a Composite Sample, such as when the discharge is of too short duration for automatic composite sampling or the sampling location is inaccessible for an automatic wastewater sampler.

10.24 : continued

A Composite Sample shall be taken at preselected intervals throughout the time in a day (or in a consecutive 24-hour period over two days when there is a continuous discharge of at least 24 hours over the course of the two days) during which the wastewater is discharged, except a shorter time period may be used if that shorter time period encompasses all or most of the wastewater discharge that day (or consecutive 24-hour period when there is a continuous discharge over the course of two days) or if a shorter period is authorized by the Authority. A batch discharge may have a Composite Sample taken throughout the discharge of the batch. A flow proportioned Composite Sample shall be taken, except a time interval Composite Sample may be taken when the Authority determines it is not feasible or appropriate to take a flow proportioned Composite Sample.

If a Grab Sample may appropriately be used, and more than one Grab Sample of a Discharge is taken during the day, the Daily Maximum Limit shall be measured by either the mathematical average of the analytical results of the Grab Samples or the analytical result of a composite of the Grab Samples.

10.25 : Dilution Prohibition

No person shall achieve, or attempt to achieve, compliance with 360 CMR 10.000 by diluting a Discharge instead of using proper pretreatment. The increased use of process water in place of proper treatment shall be considered dilution prohibited by 360 CMR 10.000.

10.26 : Compliance Measurement Location

All limitations imposed by 360 CMR 10.000 shall be applied at the end of the Pretreatment process line, at the end of the process line if there is no Pretreatment, or at or near the discharge location if there is no Pretreatment or process line. This shall not be construed to authorize a Person to introduce a pollutant into a wastestream after the compliance measurement location; rather, a sample taken at the compliance measurement location is intended to measure the pollutants in a discharge to the sewer before dilution of the wastestream.

Where it deems appropriate, the Authority may by permit or order impose alternative limits or compliance measurement locations to assure compliance with 360 CMR 10.000 and with federal, state, and local requirements. This may include use of the Combined Wastestream Formula when authorized by EPA regulations or use of a dilution factor when more than one stream is combined.

The Authority may require samples from individual process waste streams whether such waste streams are pretreated prior to discharge or not. The Authority may require that compliance measurement locations be clearly marked and/or photographed.
