

Town of Nahant WATER DEPARTMENT

Public Water Supply
3196000

Dear Water Customer,

The Nahant Department of Public Works is pleased to provide this annual newsletter to keep you informed about your water system. We would like to provide a recap of the major points for any new customers or residents who may not have seen last year's newsletter.

The Town of Nahant has 26 miles of distribution pipeline serving approximately 1400 service connections. The average daily consumption was 244 thousand gallons per day. A major water main was replaced at Nectar Place. All fire hydrants were flushed. Sewer pumping stations were inspected and maintained on a weekly basis. Water sampling was done twice a month. Water meter readings were done three times a year with Automatic Remote Reading meters.

Results of lead testing were well within federal and state guidelines for the year, with a level of 1.8 ppb well below the Action Level of 15 ppb.

For more information, including information on public meetings, the Water and Sewer Department can be reached at 781-581-0026 during regular Town Hall hours. In case of emergency, contact the Nahant Police Department at 781-581-1212.

Sincerely,

Timothy Lowe
