

Massachusetts Water Resources Authority

Massachusetts Water Resources Authority's 'AA+' general revenue bond rating and 'AA' subordinate general revenue bond rating and IDR reflect the authority's 'Very Strong' financial profile within the framework of 'Very Strong' revenue defensibility and a 'Very Strong' operating risk profile, both assessed at 'aa'. The authority's leverage, measured as net adjusted debt to adjusted funds available for debt service (FADS), was very low at 7.2x in fiscal 2023 (ended Dec. 31) and is projected to average 7.2x over Fitch Ratings' Analytical Stress Test (FAST) stress case. Leverage is expected to peak at about 7.7x in fiscal 2024, then gradually moderate to 6.8x through the remaining forward-look.

Capital spending has started to increase as the authority focuses on water pipeline replacement and water system redundancy. The 2024-2028 five-year capital spending block has risen to \$1.8 billion in projects from the 2019-2023 block of \$984 million. Fitch expects leverage to gradually increase but remain adequate for the financial profile and rating, supported by consistent FADS growth and strategic defeasance with amortization that generally outpaces debt issuance.

Fitch makes a one-notch distinction between the senior and subordinate lien obligations given the meaningful protection afforded to senior bondholders from the sizable balance of subordinate general revenue bonds and that acceleration in the general bond resolution is reserved for senior lien bondholders. Additionally, subordinate bondholders are precluded from direct remedies until such time as there are no senior bondholders.

Security

The parity general revenue bonds are payable from a first lien on the authority's net revenues, which are derived largely from wholesale rates and charges assessed on local government units. The subordinate lien bonds are payable from a second lien on net authority revenues and are subordinate only to the authority's lien securing its senior lien obligations.

Key Rating Drivers

Revenue Defensibility - 'aa'

Very Strong Purchaser Credit Quality, Very Strong Revenue Source Characteristics

Revenue defensibility is supported by purchasers that exhibit very strong credit quality. The authority has contract provisions allowing for full cost recovery and unlimited reallocation of costs across users. Additionally, the authority retains independent legal ability to raise rates without external approval. The authority plans for additional annual rate revenue adjustments of 3.4% or less through fiscal 2029.

Operating Risk - 'aa'

Very Low Operating Cost Burden, Moderate Investment Needs

In fiscal 2023, the authority's operating cost burden was considered very low, at \$2,731 per million gallons (mg), consistent with the operating risk assessment. The lifecycle ratio was elevated, at 48%, in fiscal 2023. Capex to depreciation is weaker, despite improving to a five-year average of 70% from fiscal 2019 to fiscal 2023.

Planned capital spending for the next five years should generally outpace historical depreciation, resulting in a stable to improving lifecycle ratio. Capex to depreciation is expected to average \$273 million over the coming five years, while the five-year spending block grew to \$1.8 billion through fiscal 2028. The authority plans to issue \$2.2 billion in secured bonds from fiscal 2024 to fiscal 2029 to finance the five-year capital spending block and make \$130 million in pay-as-you-go capex.

Financial Profile - 'aa'

Leverage to Remain Stable, Neutral Liquidity

The authority had very low leverage of 7.2x as of fiscal 2023. Leverage is expected to remain supportive of the current rating and range between 7.7x and 6.8x. The liquidity profile is neutral to the overall assessment, with 205 current days' cash on hand and 1.2x coverage of full obligations (COFO). Fitch-calculated total debt service coverage was 1.2x in fiscal 2023. Leverage has declined yoy from 9.8x in fiscal 2019. COFO over the past five years has been stable, ranging from just under 1.0x to 1.2x. Current days cash on hand has seen modest improvement, growing from 167 days in 2019 to more than 200 days in each fiscal year starting in 2021.

The FAST considers the potential trend of key ratios in a base case and stress scenario over a five-year period. The stress scenario is designed to impose capital costs 10% above expected base case levels and evaluate potential variability in projected key ratios. The FAST reflects Fitch's view of a reasonable scenario, which is generally informed by publicly available and/or management provided information with respect to capex, user charges and rate of revenue and expenditure growth.

In the base case scenario, the leverage ratio is projected to increase to 7.7x in fiscal 2024, then decrease to 6.5x through fiscal 2028. In the stress scenario, which is considered the rating case, the leverage ratio is expected to increase to 7.7x in fiscal 2024, then decline to 6.8x through fiscal 2028. The liquidity profile is expected to remain neutral to the assessment over the five-year horizon.

Sensitivities

Factors that Could, Individually or Collectively, Lead to Negative Rating Action/Downgrade

- A sustained trend in leverage that exceeds 9.0x in Fitch's rating case scenario analysis;
- Deterioration of the credit quality of the authority's largest purchasers that pressures the revenue defensibility assessment;
- The senior lien rating could converge at the subordinate lien level if there is significant erosion in the financial cushion afforded to senior bondholders that results in a lack of meaningful difference in the probability of payment default between the two liens.

Factors that Could, Individually or Collectively, Lead to Positive Rating Action/Upgrade

- Continued favorable trend of leverage that more closely approximates 6.0x on a sustained basis within Fitch's rating case scenario analysis.

Profile

MWRA provides wholesale water and wastewater services to communities located primarily in eastern Massachusetts. About 3 million people (or 44% of the population of the commonwealth) reside in the authority's service area. The largest community within the service area is the City of Boston, which is served through the Boston Water and Sewer Commission (BWSC; revenue bonds rated AA+/Stable). BWSC contributes approximately 30% of MWRA's revenue derived from rates and charges. The City of Boston generally is economically diverse, and wealth levels tend to be above the national average.

The authority's ample water supply is drawn primarily from the Quabbin and Wachusett reservoirs and the Ware River. Under present operating rules, the authority's water sources can supply a safe yield of approximately 300 million gallons daily (mgd), which has not been exceeded since 1989. Demand continues to decline due to improvements in water efficiency and increased conservation efforts, making current supply more than sufficient to meet demand through at least 2060.

The authority operates two relatively new water treatment plants with a combined treatment capacity of 428 mgd, which is more than sufficient capacity to meet the average demand of less than 200 mgd.

The authority's retail customers collect and convey wastewater to MWRA, which provides transport and treatment at its two wastewater treatment facilities for combined average daily flow treatment capacity of 365 mgd. Average daily flows for the past five years registered just over 300 mgd.

MWRA Response to Updated Federal Regulations

The authority is addressing new regulations set forth by the EPA. The EPA's enhanced focus on lead and copper lines and per- and polyfluoroalkyl substances (PFAS) has led to the introduction of the Lead and Copper Rule Revisions (LCRR) and proposed Lead and Copper Rule Improvements, along with specific testing for PFAS contaminants. The MWRA is addressing the LCRR, ensuring compliance through lead testing and adhering to copper standards.

With the LCRR's update in December 2021 and a compliance deadline of October 2024, the MWRA has initiated a review of corrosion control practices. In districts with high lead levels local bodies are required to undertake educational programs and replace lead service lines.

Anticipating further rule updates by October 2024 which may call for a 10-year timeline to replace all lead service lines, the MWRA is working with its advisory board to modify its loan program to assist local bodies with this potential requirement. Based on current and historical sampling results, the authority will easily meet the EPA's final maximum contaminant levels for the six PFAS compounds regulated by the ruling.

Revenue Defensibility

Revenue Source Characteristics

Revenue source characteristics are very strong, reflecting the authority's independent rate-setting authority and ability to reallocate costs among purchasing entities to provide for full cost recovery.

Authority revenues are derived from an assessment on the 61 local communities included within its service area; assessments for MWRA services are a general obligation of each community. Furthermore, rate-setting is not subject to any limitations, including the state's Proposition 2 1/2. These protections, coupled with the authority's ability (pursuant to its enabling act) to utilize a local aid intercept to recover amounts unpaid by one of its member communities (excluding revenues of BWSC and other special-purpose local bodies), provide significant revenue protection.

Rate Flexibility

The authority adopted a 2.4% rate adjustment for fiscal 2024, lower than the 2.8% and 2.95% adjustments adopted in fiscal 2023 and 2022, respectively. Planned rate adjustments are expected to range from 3.3% to 3.4% from fiscal 2025 through fiscal 2029. Although the planned adjustments are higher than historical increases, MWRA's long-term rate forecasts continue to trend below prior estimates. Combined rates originally were projected to climb by as much as 5.2% annually by 2021, but are now estimated to rise by no more than 3.4% annually through fiscal 2029. Actual rate adjustments may be less, as MWRA applies surplus revenues to level off near-term escalations in debt service costs.

Purchaser Credit Quality

The revenue defensibility assessment also takes into account the very strong purchaser credit quality, represented by a Purchaser Credit Index of 1. The largest purchasing member communities include BWSC, Newton, Quincy and Cambridge, which together make up more than 40% of authority revenues. Fitch assesses the credit quality of BWSC, Newton and Cambridge as very strong, while Quincy is considered strong.

Boston Water and Sewer Commission

BWSC, which will account for about 29.9% of the authority's fiscal year 2024 rates and charges, buys water from the authority and uses its system to transport wastewater. Governance of BWSC is provided by a separate, independent board of commissioners appointed by the city's mayor. BWSC provides water distribution and sewer collection service to the residents of the City of Boston, providing essential services to a diverse and stable customer base.

In fiscal 2023 the commission served a population of approximately 692,000 residents and approximately 90,000 accounts, while it recently added a stormwater charge, increasing accounts by 8,000. No revenue or usage concentration exists among BWSC's customer base, the vast majority of which is residential. Although it lacks taxing power, BWSC self-funds through user fees and charges, which are set independently and must cover operational costs, debt service, reserves, repairs and legal obligations. BWSC has secured its revenues against its outstanding bonds and prioritizes bond debt service and operational expenses over the authority's charges. Authority assessments for water and wastewater services are a significant portion of BWSC's expenses and are anticipated to be 55.6% in 2024.

Asymmetric Factor Considerations

No asymmetric rating factor considerations affect the revenue defensibility assessment.

Operating Risk

Operating Cost Burden

The authority's operating cost burden is very low, averaging about \$2,700 per mg for the past five years. Operating costs are expected to increase based on inflationary costs and generally stable demand, but should continue supporting the assessment for the foreseeable future. The metric can vary according to the weather, but remains favorable for the assessment.

Capital Planning and Management

The authority has established a capital spending cap to create an amount not-to-exceed over a five-year period. The spending cap was initiated in 2003. The fifth and most recent capital improvement plan (CIP) cap adopted runs from 2024 to 2028 and totals \$1.8 billion. Asset protection accounts for the largest share of the cap, at 63.9% (\$1.2 billion), and the authority's water redundancy for 20% (\$365.8 million).

The lifecycle ratio has trended up and now registers 48%. However, planned increases to capital spending in the coming years are expected to average \$336 million, which should reverse the trend. Despite what appears to be a weakening trend in capital investment, the authority routinely has an outside party assess its capital assets and the most recent report, from October 2023, states that assets are in good condition and finds that levels of investment under the current spending cap are appropriate to maintain assets in good operating order.

The 2024-2028 CIP includes \$166.2 million to cover the initial costs of a redundancy tunnel, with the authority in the early planning stages. Total costs of the Metro Tunnel Project are currently estimated at \$1.8 billion, with the bulk of the spending (\$1.1 billion) starting around fiscal 2034; as such, the current five-year spending cap does not represent peak planned spending on the project.

The 2024-2028 cap continues a trend of increased capital investment. Past caps totaled \$984.8 million (2019-2023) and \$791 million (2014-2018). Despite the uptick in expected spending with the current spending cap, Fitch believes future capital costs will remain manageable given MWRA's project oversight and its board's self-imposed spending cap for capital projects.

MWRA maintains a 40-year master plan for the system that is updated every five years and will be updated again in 2024. The current plan dates from fiscal 2018 and totals \$5.75 billion, which includes \$2.58 billion for water projects and \$3.17 billion for sewer projects. About 69% of the water projects focus on water redundancy, with remaining projects related to ongoing asset protection and rehabilitation; over 90% of wastewater projects are related to ongoing asset protection and rehabilitation.

Funding for capital needs will continue to come almost entirely from long-term borrowings, including revenue bonds, state revolving fund loans and CP notes. The authority's capital improvement plan remains sizable, but spending is significantly below historical levels, costs having been driven up by the cleanup of Boston Harbor in the 1990s and by completion of the majority of the combined sewer overflow (CSO) in recent years.

Asymmetric Factor Considerations

No asymmetric rating factor considerations affect the operating risks assessment.

Financial Profile and FAST Analysis

The financial profile is very strong and reflects the authority's continued downward leverage trend, to 7.2x for fiscal 2023 from 9.8x in fiscal 2019. Continuous declining leverage is supported by the strategic defeasance of outstanding debt obligations from budget surplus and refinancing opportunities. Since fiscal 2006 the authority has defeased bonds with a total of \$828 million in debt service. The liquidity profile is considered neutral to the assessment. The authority's coverage of full obligations (COFO) was just under 1.0x in fiscals 2019 and 2020, but concerns are mitigated by the favorable liquidity cushion of 205 days for fiscal 2023; COFO for fiscal 2023 registered at 1.2x.

Fitch notes the meaningful difference between the Fitch-calculated debt service coverage (DSC) on the senior lien and the all-in DSC as support for the one-notch differential between the senior and subordinate liens. Fitch-calculated DSC on senior lien obligations has averaged 2.0x since 2018, while all-in DSC has generally been sum-sufficient. The Fitch-calculated all-in DSC includes subordinate public debt and privately placed state revolving fund loans.

Management forecasts point to continued stable financial margins based on the authority's conservative budgeting practices. DSC is expected to remain near historical norms and generate surpluses that the authority expects to use to defease future debt maturities. MWRA's positive variances are driven by conservative budgeting estimates (particularly with regard to variable interest rate costs) and expenditure controls.

Fitch Analytical Stress Test

The FAST considers the potential trend of key ratios in a base case and a stress case, with the stress case designed to impose capital costs 10% above expected levels and evaluate potential variability in projected key ratios. Fitch's base case was informed by the authority's fiscal 2024 Current Expense Budget, about 10% pay-as-you-go funding and planned debt financing, which include recent draws on state revolving loans. Revenue growth from 2025 to 2028 is assumed at the five-year CAGR of 2.4% and expense growth was assumed to align with revenue growth.

Leverage in the FAST base case declines yoy, to 6.6x by fiscal 2028, with the stress case reflecting a similar trend, with leverage declining to 6.8x over the same period. The liquidity profile is expected to remain neutral to the assessment, with annual COFO of at least 1.1x and sound days cash on hand.

Asymmetric Additive Risk Considerations

No asymmetric additive risk considerations affected this rating determination.

ESG Considerations

The highest level of ESG credit relevance is a score of '3', unless otherwise disclosed in this section. A score of '3' means ESG issues are credit-neutral or have only a minimal credit impact on the entity, either due to their nature or the way in which they are being managed by the entity. Fitch's ESG Relevance Scores are not inputs in the rating process; they are an observation on the relevance and materiality of ESG factors in the rating decision. For more information on Fitch's ESG Relevance Scores, visit <https://www.fitchratings.com/topics/esg/products#esg-relevance-scores>.

Please read these limitations and disclaimers by following this link: <https://www.fitchratings.com/understandingcreditratings>. In addition, the following <https://www.fitchratings.com/rating-definitions-document> details Fitch's rating definitions for each rating scale and rating categories, including definitions relating to default. Published ratings, criteria, and methodologies are available from this site at all times. Fitch's code of conduct, confidentiality, conflicts of interest, affiliate firewall, compliance, and other relevant policies and procedures are also available from the Code of Conduct section of this site. Directors and shareholders' relevant interests are available at <https://www.fitchratings.com/site/regulatory>. Fitch may have provided another permissible or ancillary service to the rated entity or its related third parties. Details of permissible or ancillary service(s) for which the lead analyst is based in an ESMA- or FCA-registered Fitch Ratings company (or branch of such a company) can be found on the entity summary page for this issuer on the Fitch Ratings website.

In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed. Fitch Ratings makes routine, commonly-accepted adjustments to reported financial data in accordance with the relevant criteria and/or industry standards to provide financial metric consistency for entities in the same sector or asset class.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.
