METROPOLITAN WATER TUNNEL PROGRAM

NOTICE TO ABUTTERS

Brookline

The Massachusetts Water Resources Authority (MWRA) will be conducting field work to support a major water supply tunnel program in the Metropolitan Boston Area. The two proposed water tunnels will improve reliability for our water infrastructure and allow our aging existing water tunnel system to be rehabilitated without interrupting service.

As part of the design effort, MWRA has hired CDM Smith and other firms to perform geophysical survey in the Program study area. The geophysical survey will include non-intrusive seismic survey to evaluate subsurface geologic conditions.

The seismic survey will involve blocking of a narrow strip of sidewalk, road or vegetated area, placing a line of small sensors on ground surface that are connected to a seismograph for data recording, and hitting the ground with a sledgehammer or weight. No excavation or heavy equipment will be used. At each location, the work is estimated to take about one to two days to complete.

MWRA has planned for geophysical survey activities along the edge of the roadway and in the grass shoulder along Fairgreen Place. The roadway may be slightly narrowed but access will still be maintained.

Work is scheduled to begin the week of July 25th, weather dependent, and occur typically between 7:00 a.m. and 4:00 p.m., Monday through Friday. Construction Zone Safety Plans will be implemented for traffic control, and ensuring worker and general public safety in each area.
